

The Recycling of Local Prosperity aka...The Golden Key

Very few things in life offer us the opportunity to advance our world by providing the people with a “vehicle” that will produce good healthy things that improve our way of life on all fronts. And will do so in a very short period of time.

I call this “vehicle” the Golden Key.

The largest area of revenue flow coming from inside our borders and flowing outside to certain other countries involves the purchase of oil from other producer nations to meet our energy needs, including the fueling of our vehicles.

This River of Revenue is huge. And it would be naïve of us to believe that along the way this huge river of money flowing outward is not also being tapped into for other undisclosed purposes...(multi-trillion dollar global wars?)

Add to this the fact that most of our productive backbone has been handed over to the rest of the world via the “free trade agreements” of NAFTA and GATT, that our so-called representatives have claimed would give the people more JOBS but have had the real effect of gutting us from the inside. (for reasons of which I won't go into here)

OK so what do we have here?

A majority of our prosperity derived from our former domestic productivity now handed over to the world so they can prosper (China and others)

AND....

An increasing demand for fuel in our country with the resultant export of our REMAINING prosperity for the purchasing of that product from those countries.

And this remaining prosperity is running out!

And if the above was not bad enough we now have to contend with the likes of the “International Financial Engineers” who have the power and sophistication to manipulate those fuel prices just like was done in California and it's electric grid (Enron).

The likes of the Boesky's (insider trading fame), Milken's (junk bond fame)

and Fastow's (Enron fame) dictate to us what the deal is going to be and our so-called representatives in Congress and the bureaucrats in the Treasury Department are no match for these masters of money.

I see the above as nothing less than a National Emergency and this time is different than any other time in our history.

And this emergency was not created and facilitated by ALIENS FROM ANOTHER PLANET!

It has happened by way of a combination of action/inaction by those we place in office to manage our country!

There will always be sharks out there seeking profit at the expense of the people. But oversight and management of them is totally non-existent.

It is time for the people to start understanding the concept of Recycling Local Prosperity.

Very simply, this means keeping the money inside the locality from which it originates...where it starts to where it ends.

When the people realize then embrace this powerful concept, supporting others who are taking first steps to bring it about locally will follow. And everyone's lives will be improved virtually overnight!

First Steps

Under the power of our U.S. Constitution the states and the people have far more power than the Federal government, for all rights not so enumerated and granted to the Federal Government...are reserved to the States and the people...

There are those who are working vigorously behind the scenes to create the ability locally, to allow the production of Bio-Fuels and the use of these life saving fuels in our vehicles, and homes.

This production would basically involve the growing of a variety of "feedstocks" (there are many) on OUR existing unused farms and dormant vacant lands. These feedstocks include corn (grain ethanol) and its other component corn stover, the leafy component, for (cellulosic ethanol).

The Hi-nutrient by-product of this process, DDGS, would replace corn to be used for animal feed and fertilizer.

In the above process the energy component is extracted from the corn and stover and the nutrient component is returned to the food chain and then in a far more concentrated form.

Hence, the BIG LIE from BIG OIL about our food supply being affected!

Switchgrass is another huge benefit feedstock and I personally think that our roads should be lined with this attractive, noise attenuating, high energy producing plant that needs nothing to grow on it's own and can then be harvested by our existing infrastructure residing in our TOWN HIGHWAY DEPARTMENTS!

And then delivered to the landfill where possibly that CELLULOSIC ETHANOL PLANT CAN BE FOUND and to then PROCESS THAT HARVESTED ROADSIDE FEEDSTOCK INTO CELLULOSIC ETHANOL and wait for the TANKER TRUCKS TO PICK UP THE FUEL FOR DELIVERY TO THE LOCAL ETHANOL (e-85 and blender pump) FUEL STATIONS!

A reading of the relevant history on this subject will bare out the facts, the lies and the key players in this. There is nothing new.

From Henry Ford and the Model A and T (both alcohol configured) and all of his efforts to create an alcohol/ethanol society for the people, to the "Dark One"... Rockefeller, oil interests, Prohibition...and the funding of a long list of bad things counter to the peoples interests but serving his own.

To be continued...
